Educational Program – Technical part

## Contents

Contents.....	
About the project.....	
1. Technical part.....	
1. EU Energy Policies and Energy Strategy 2050.....	
1.1. Energy Road map.....	
1.2. Near Zero Energy Buildings and Passive houses.....	
1.3. National legislation in terms of energy efficiency in households.....	
2. Basic principles of energy and heat.....	
2.1. Definitions of energy, different types of energy, energy units.....	
2.2. Primary and final energy.....	
2.3. Energy in households.....	
3. Heat exchange and material properties.....	
3.1. Thermal conductivity.....	
3.2. Convection.....	
3.3. Thermal radiation.....	
3.4. Heat transmittance.....	
3.5. Building envelope.....	
3.6. Variation of energy consumption depending on the insulation of walls.....	
3.7. Heat losses through walls.....	
3.8. Infiltration and thermal bridges.....	
3.9. Glazing.....	
4. Indoor comfort and indoor temperature and humidity requirements.....	
4.1. Comfort and indoor air temperature.....	
4.2. Comfort, humidity and ventilation.....	
5. Heating.....	
5.1. Overview of different sources of heating energy.....	
5.2. Heat energy usage in households.....	
5.3. Heating and fuel prices.....	
5.4. Heating installations.....	
6. Ventilation and humidity.....	
6.1. Relationship between humidity and ventilation.....	
6.2. Relationship between humidity and heating.....	

- 6.3. Ventilation installations in households .....
- 7. Electricity.....
  - 7.1. Electricity use in households.....
  - 7.2. Electrical devices in households.....
  - 7.3. Stand-by losses.....
  - 7.4. Energy labelling of electricity devices .....
  - 7.5. Monitoring and calculating electricity energy in households .....
  - 7.6. Electricity measuring.....
  - 7.7. Reading the energy bills .....
- 8. Lighting.....
  - 8.1. Introduction in lighting in households .....
  - 8.2. Different types of lamps.....
  - 8.3. Health consideration of lighting and disposal of lamps .....
  - 8.4. Criteria when buying lamps .....
  - 8.5. Motion detectors and dimmers .....
- 9. Water use in households.....
  - 9.1. Consumption of water in households .....
  - 9.2. Water prices at national levels.....
  - 9.3. Calculation of water consumption in households.....
  - 9.4. Domestic hot water.....
  - 9.5. Analyse the water bills .....
- 10. Renewable energies .....
- 10.1. Solar energy .....
- 10.2. PV installations for households.....
- 10.3. Geothermal installation .....
- 10.4. Water energy.....
- 10.5. Biofuels.....
- 10.6. Wind energy.....
- 10.7. Energy storage.....
- 11. CO2 emissions .....
- 12. Good practices for energy efficiency in households .....

## About the project

IDEA (Innovative Direction in Energy Advising) project's purpose is to develop innovation in education about energy poverty. The main objective is to improve existing and develop new innovative educational methods and materials for adult training on energy poverty. The partnership consists of experienced organisations strategically placed in the most affected region regarding energy poverty - in Bulgaria, Croatia, Slovenia and Cyprus. The project is implemented by University of Cyprus, DOOR Society for Sustainable Development Design, Energy Agency Plovdiv and Focus Association for Sustainable Development. It is funded by Erasmus+ programme.
